

# Drain Control

**Drainage and Sewer Specialist  
24 hours a day - 365 days a year**

**CCTV Surveys • Drain Installations and Repairs • High Pressure Water Jetting  
Waste Control • Rotary Machines • Pumps • Plumbing**

**Approved by these organisations to ensure the highest Health & safety Standards and financial stability**

Drain Control is one of the UK's leading privately owned drainage specialists, with a reputation for quality and personal service, specialising in all aspects of drainage works, including; high pressure water jetting, rotary machines, plumbing, pumps, excavations and drainage repairs, closed circuit colour TV using the very latest equipment.

## CCTV Surveys and Drain Tests

A CCTV colour survey can locate cracked or collapsed pipes and sewers and the cause of ongoing blockages. This saves the cost of excavating good pipe work and is an excellent means of locating corrosion, building rubble, subsidence, scale and even tree roots.

Drain Control's CCTV teams add substantial weight to both the drain clearance and repairs divisions. Our systems can locate a drainage fault to the nearest metre or help find drain runs and their depth. This eliminates the familiar problem of lost drainage plans, an all too common occurrence.

Water Training International 0S.20X pipe sewer condition classification.

**Insurance Companies    Housing Associations    Hotels and Motels    Commercial**  
**Petro-Chemical Plants    School-Colleges    Power Plants    Transport Systems**

Drain Control's fleet of radio-controlled service vans, combination vacuum tankers and lorry mounted HPWJ units are on call 24 hours a day - 365 days a year, controlled by our 24 hour manned control, for all emergencies. All our service personnel are fully qualified and equipped with the latest technology to enable them to deal with anything from a blocked sink to a collapsed sewer.

In addition, our management is on hand for emergency advice if required and supervisors monitor each engineer for Health & Safety and Traffic Management standards and quality of work on site.

## Pump Installation and Maintenance

A full range of water and sewage pumps, booster sets and pressurisation units installed and maintained.

- Preventative maintenance
- Site surveys
- 24 hour breakdown response
- New product installation
- Pipe work services
- Large and small circulation pumps

## Drain Installations and Repairs

Drain Control have been involved in excavations and drain repairs for over 20 years and our teams have built up a wealth of experience in industrial, commercial and domestic properties.

The department has its own engineers, surveyors and estimators who carry out various tasks, from installing individual gullies in car parks to entire drainage systems for new housing and commercial developments. Other installations carried out by our excavation teams include grease traps, septic tanks, drain runs, surface water channels, gully traps, inspection chambers, interceptors and connections to sewers.

### We undertake all aspects of drain repairs:

Full installation. Foul and surface water drainage. Gullies, road gullies, surface water channels. Inspection chambers. Anti-flood devices. Control valves. Pump and pump pits. Vents. Interceptors, petrol interceptors. Grease traps and septic tanks. Stack pipes, Anti-siphon pipes. Cast iron systems. Waste pipes. Land drainage. Internal drainage systems.

## High Pressure Water Jetting

Drain Control has a vast experience of high pressure water jetting. This is an ideal way of preventing or clearing blockages in pipes and sewers, thus stopping the build up of debris, scale and silt without damage or mess.

Using a hand held lance, high pressure water jetting is also perfect for removing paint, grease, rust and lime scale from a wide range of surfaces such as floors, garage walls, factory ceilings, airport runways and ships' decks and hulls.

## Rotary Machines

Our engineers are equipped with a wide range of rotary machines to clear the most stubborn blockages. Pipes are, without damage, restored to full bore.

**Drain Control undertake Regular Maintenance programs.**

**Commercial Buildings   Local Authorities   Food Processing Plants   Manufacturing Plant  
Homes   Construction Industry   Health Authorities   Property Management**

## Waste Control

Drain Control vacuum tankers and combination units are ideal for emptying and cleaning road gullies, petrol interceptors and associated lines, main sewer systems.

With their large combination (vactor) units, drains up to 1200mm (48") diameter can be high pressure water jetted to remove silt and sludge from along the main drain to a convenient access point where the unit can suck up the slurry and dispose of it at suitable licensed sites. Drain Control have completed projects such as the cleaning of the drainage on the M25, the main sewer running under the London Dockland development and the emptying and cleansing of one of Europe's largest sewage treatment works.

Registered under the control of pollution act 1989. GTL 1361857

## Plumbing

Drain Control specialises in all aspects of plumbing and heating work from minor maintenance to full system installations. We provide a 24hr service through manned telephones on 0208 301 4580 via radio links to our mobile plumbers. We are an approved contractor for various local authorities, housing associations, property management companies, schools, health authorities and commercial companies.
